

DATAVERSE OMNICHANNEL MODEL

Building a governed data model for 5 channels and
6 countries.

THE PROBLEM AND THE OBJECTIVE

Create a unified, actionable, and governable
view for management use at the
omnichannel level

Bronze layer

Raw data ingestion from 5 different sources, standardized to the Parquet format. Preserves metadata and traceability without alterations.

Silver layer

Intensive standardization. Unified format per channel, correction of typos, removal of missing values, and centralized conversion to EUR.

Gold layer

Aggregated KPI tables (Revenue, Fulfillment, Returns), ready for direct executive use in Power BI.

MEDALLION ARCHITECTURE

KPIs

The Retail channel contributed 176.87 million euros, representing 37.74% of total combined revenue.

Gross Revenue by channel

~12.8%

Return Rate

~78%

Fulfillment Rate Global

INSIGHTS FOUND

The Driver is Frequency: The average ticket is practically identical between both groups (~€348 vs ~€359).

1.70x More Orders: Members buy significantly more often (553K orders vs 325K).

Conclusion: The focus should not be on making them spend more per transaction, but on making them buy more frequently by joining the club.

THANK YOU
